- Periodic Signals: Repeat at regular intervals over time.
- Aperiodic Signals: Do not exhibit regular repetition.

What Are Systems?

Systems are processes or devices that manipulate signals, transforming input signals into output signals. Examples include filters, amplifiers, modulators, and communication channels. Systems can be characterized by their properties:

- Linearity: The system's response to a sum of inputs is the sum of responses.
- Time-Invariance: System properties do not change over time.
- Causality: Output depends only on current and past inputs.
- Stability: Bounded inputs produce bounded outputs.
