Getting Started with Your First Neural Network

Now that your environment is set up, let?s walk through creating, training, and evaluating a simple neural network.

Step 1: Prepare Your Data

Neural networks require input-output pairs for training.

Example: XOR problem

| Input 1 | Input 2 | Output |

|---------|---------|---------|

| 0 | 0 | 0 |

| 0 | 1 | 1 |

| 1 | 0 | 1 |

| 1 | 1 | 0 |

Code to define data:

```matlab

inputs = [0 0; 0 1; 1 0; 1 1]';

targets = [0 1 1 0];

```

Note: For more complex datasets, load and preprocess your data accordingly.

Step 2: Create a Neural Network

For simple tasks, a feedforward network with one hidden layer suffices.

```matlab

net = feedforwardnet(10); % 10 neurons in one hidden layer

```

You can customize the network architecture:

- Number of hidden layers
- Number of neurons per layer
- Transfer functions

Step 3: Configure and Train the Network

Configure your network with the data:

```matlab

net = configure(net, inputs, targets);

```

Choose a training function, e.g., Levenberg-Marquardt:

```matlab
net.trainFcn = 'trainlm';
```

Train the network:

```matlab
[net,tr] = train(net, inputs, targets);
```

Note: MATLAB automatically splits data into training, validation, and test sets unless specified otherwise.

Step 4: Test and Evaluate the Network

Use the trained network to predict outputs:

```matlab
outputs = net(inputs);
disp(outputs);
```

Compare predictions with actual targets for accuracy.
